Personal Summary

Passionate backend developer with hands-on experience in Python, Django, and RESTful APIs. Skilled in building scalable web applications, automation systems, and data-driven solutions using PostgreSQL, Redis, Celery, and Docker. I've been coding since 4th grade, driven by curiosity and problem-solving, and I enjoy creating clean, efficient backend systems that make an impact.

Skills

Languages

Python, Bash, JavaScript, Java (basic), C++ (basic)

Databases & Caching

PostgreSQL, SQLite, Redis

Other

API development, automation, debugging, testing, shell scripting, documentation, security basics

Backend

Django, Django REST Framework, Celery, JWT authentication

Tools

Git, Docker, Docker Compose, uv, pacman, yay, apt

Systems

Linux (Arch, Ubuntu), Windows

Soft Skills

Problem-solving, communication, teamwork, leadership, quick learner

Projects

FedxD Data Container (FxDC)

- Open-source Python library that converts objects into a readable text format (.fxdc) and back into their original classes.
- Built a custom lexer, parser, and object system with support for decorators and user-defined classes.
- Tech: Core Python (Lexer, Parser, Custom Object System, Decorators)

Skyntel, 🏆 2nd Place — NASA Space Apps Challenge 2025, Karachi Local Event

- Interactive weather app with AI query support, personalized alerts, daily email subscriptions, and live user weather reports.
- Backend powered by Django REST Framework, with Celery for automation, Redis for caching, and PostgreSQL for storage.
- Deployed using Docker and Nginx reverse proxy, integrated with Groq AI and multiple weather APIs.
- Tech: Django REST Framework, Celery, PostgreSQL, Redis, Docker, Nginx, Groq AI

FxChange

- Built a demo stock and crypto exchange where users can trade with virtual currency, track performance, and grow their profiles.
- Implemented custom admin panels, real-time graphs, secure email verification, and integrated multiple external APIs for live stock and crypto data.
- Tech: Django, SQLite, JavaScript, External APIs, Graphing Solutions, Email Verification

Webstore

- Developed a full e-commerce platform with product listings, inventory control, discounts, carts, and real-time checkout calculations.
- Added custom admin panels, secure email verification, and search functionality to improve user experience.
- Tech: Django, SQLite, JavaScript, Admin Panels, Real-Time Calculations, Email Verification, Search Systems

Experience

Manager, KayzBlog	07/2024 – Present
Built and maintained the blog platform with Django and SQLite, adding features like search, likes, comments, and video embedding.	Karachi, Pakistan

Developed custom admin panels for managing posts, categories, and users.
Edited 6–8 videos per month and completed 12–15 research-based articles monthly.
Grew the social media page to 4000+ followers, with the top video reaching 10,000+ views and 1,200+ likes.

Lead Developer, Disutils	11/2024 – 01/2025
Designed and developed a Discord gaming bot in Python with database-backed user and economy management.	Remote

Implemented features including card games, gambling mechanics, custom currency, lotteries, and banking systems.
Used async programming and Discord API to handle multiple concurrent requests efficiently.
Bot was deployed in 10+ servers and processed hundreds of commands daily.

Education

Intermediate, Computer Science, Fatimiyah Boys College, Karachi, Pakistan	2024 – Present
	Karachi, Pakistan

Matriculation, Computer Science, Happy Home School (HHS), Karachi, Pakistan	2016 – 2024
	Karachi, Pakistan
